SUFYAN ABDUL GHANI

Senior Backend Engineer — Java · Spring Boot · Distributed Systems · Payments

Riyadh, Saudi Arabia | sufyan.abdulghani@gmail.com | +966 53 004 8943 | linkedin.com/in/sufyanghani | github.com/SUFIAG | sufyanghani.com

SUMMARY

Backend engineer with six years building payment, payroll, and financial-compliance systems in Java and Spring Boot. Work spans cross-border money transfer, global payroll, AML screening, and trade risk platforms for banks and fintechs in the UK, US, China, and the GCC. Owns services end to end — design, delivery, deployment, and production support — and has led small distributed teams across time zones.

SELECTED ACHIEVEMENTS

- Led four backend engineers across three time zones on a global Employer of Record platform, owning architecture review, code review, and release sign-off.
- Cut release cycle time by 40% by replacing a manual deployment process with Docker, Kubernetes, Jenkins, and ArgoCD pipelines at a UK money-transfer network.
- Reduced watchlist-screening response time by 35% on an AML platform serving regulated banks, through query optimisation and integration redesign.

TECHNICAL SKILLS

Core: Java (8–21), Spring Boot, Spring Security, Spring Cloud, Hibernate/JPA, REST API design, Apache Kafka, Microservices, Event-Driven Architecture, PostgreSQL, MySQL, Redis, Docker, Kubernetes, AWS

Working knowledge: Kotlin, gRPC, GraphQL, WebSocket, MongoDB, Elasticsearch, DynamoDB, RabbitMQ, Amazon SNS/SQS, Terraform, Jenkins, ArgoCD, Prometheus, Grafana, ELK, SonarQube

Security: OAuth 2.0, JWT, OpenID Connect, Keycloak, RBAC, TLS

Practices: Distributed systems design, idempotency and retry safety, CQRS, hexagonal architecture, JUnit/Mockito, CI/CD, observability, code review, technical mentoring

EXPERIENCE

Senior Software Engineer | Cloud Solutions — Riyadh, Saudi Arabia Apr 2026 – Present

[EDIT: one line describing what Cloud Solutions does and who its customers are.]

- [EDIT: what you own — which services, which domain, what scale. Name a system, not a technology.]
- [EDIT: a measurable outcome. Latency, throughput, incident rate, delivery time — whichever you can defend under questioning.]
- [EDIT: scope or leadership — team size, cross-team work, or a decision you owned.]

Senior Software Engineer (Contract) | YeeGoo Technologies — Beijing, China (Remote) Aug 2024 – Mar 2026

Employer of Record platform handling employment, payroll, and contractor payments for companies hiring across borders.

- Built and owned backend microservices on Java 21 and Spring Boot 3 for the onboarding and global payroll domains, cutting customer onboarding time by roughly 30%.
- Delivered payroll modules processing cross-border payment runs across multiple currencies and jurisdictions, reworking the settlement path to reduce transaction latency.
- Designed event-driven contractor onboarding on Apache Kafka, replacing a synchronous flow that blocked activation on third-party verification and enabling real-time status tracking.
- Led a distributed team of four backend engineers — technical design discussions, code review, mentoring, and adherence to architecture and security standards.

Senior Backend Developer | Small World Financial Services — London, UK (Remote) Aug 2023 – Jun 2024

International money-transfer network operating across retail and digital remittance corridors.

- Owned payment-processing microservices on the transfer path, focusing on retry safety and idempotency under partial third-party failure.
- Rebuilt the deployment pipeline with Docker, Kubernetes, Jenkins, and ArgoCD, cutting deployment time by 40%, increasing release frequency, and reducing failed releases.
- Implemented end-to-end observability with Prometheus, Grafana, and centralised logging, halving mean time to detect production incidents.

Software Engineer | Corrtec (Private) Limited — New Jersey, USA (Remote) May 2022 – Aug 2023

Trade asset risk management software for correspondent banking.

- Delivered backend services for CorrRisk, the company's trade risk platform, supporting real-time trade processing for international banking clients.
- Implemented OAuth 2.0 authentication and authorisation across the service estate and established the team's code review and testing practice.
- Containerised deployment with Docker and Kubernetes, replacing manual server provisioning and improving release consistency.

Software Engineer | BenchMatrix — Manama, Bahrain Jan 2020 – Apr 2022

Risk and regulatory compliance software for banks across the GCC and South Asia.

- Built watchlist screening, customer risk assessment, and transaction monitoring for Risk Nucleus, the company's AML platform.
- Cut screening response time by 35% through database query optimisation and redesigned integrations with third-party screening providers.
- Reduced false-positive alert volume by tightening name-matching and risk-scoring logic, directly lowering the review burden on client compliance teams.
- Decomposed monolithic components into microservices, improving scalability and reducing deployment-related downtime.

SELECTED PROJECTS

- **PayOps360.** Payment operations platform (Java 17, Spring Boot 3, PostgreSQL, Next.js) — multi-provider payment processing behind a unified API, with an idempotency engine, asynchronous webhook ingestion, and dead-letter handling. github.com/SUFIAG/payOps360
- **Intelligent Document Processing.** Document processing microservice (Spring Boot, AWS Textract, OpenAI API) — automated invoice extraction, document classification, and structured data generation, cutting manual processing effort by around 70% in testing.
- **Real-time data platform.** Fault-tolerant streaming pipeline (Apache Kafka, Apache Spark, Java) — event-driven ingestion, transformation, and analytics over a continuous weather-event feed.

CERTIFICATIONS

Certified Kubernetes Application Developer (CKAD) · Confluent Certified Developer for Apache Kafka · AWS for Developers · Extending, Securing & Dockerizing Spring Boot Microservices

EDUCATION

B.S. Computer Science & Information Technology | NED University of Engineering and Technology, Karachi, Pakistan 2016 – 2020

CGPA 3.14 · Koshish Merit Scholarship · Coursework: Data Structures & Algorithms, Distributed Computing, Software Engineering, Computer Architecture, Systems Analysis & Design
